

Long Island Produce

*It's summer on Long Island,
and the east end is blooming with fresh produce.
So, why are restaurants getting their produce from
California? Long Island offers restaurateurs the
freshest possible produce straight from the farms
to their kitchens.*

*J. Kings Food Service Professionals, Inc. has
joined forces with local Long Island farmers to
sell the best Long Island has to offer, the freshest
produce available.*

*We are now the link from the farms to the table
for the crisp Long Island produce for which the
Island produce chefs long.*

Long Island Farm Highlight
An East End Treasure

Satur Farms, Cutchogue, New York

Satur Farms, the Cutchogue business that Paulette Satur started in 1997, with husband and four star chef Eberhard Müller. Satur grew up on a dairy farm in central Pennsylvania and has a master's degree in plant physiology from University of Arizona. With Satur's education and background, combined with the chef's expertise in Müller, Satur Farms created the perfect combination for success. Satur Farms provides exquisite vegetables and herbs for hundreds of New York City restaurants, and on the North Fork. The farm, set on the North Fork of Long Island, designated New York's sunniest spot, with moderate temperatures due to the surrounding waters, along with the breeze coming off the water, creates the ideal location for vegetable farming. The farm is computerized, with coding for the planting dates, harvesting dates, and assorted growing notes for the 60 different varieties of produce.

Practices like harvesting lettuce in the morning before the heat has made the leaves bitter, and immediately moving them to an ultra-cool packing shed, eliminates errors before the produce reaches the kitchen. "I really believe in producing the best quality that we possibly can." says Müller.

Satur and Müller will plant more than 200 acres of fruit, herbs, assorted vegetables, lettuce and some 35 varieties of tomatoes this season. In the salad category, the farm produces microgreens (harvested just 10-12 days after planting), meslun, and head lettuce. Müller has grown to realize exactly what "fresh" means, and will not settle for anything less in his restaurant. Planning the menu around the seasons and the availability of ingredients is what all chefs should be doing. "I used to think I was using fresh ingredients, but I wasn't. I go out in the farm and see what's ripe. Then I decide what I'm cooking." Many chefs feel the same way, searching for ingredients that are truly "fresh".
